

OLUWADAMILOLA OGUNBODE

Washington, DC 📍 (301)242-1073 ✉ o.ogunbode5@gmail.com [in /in/dammyog](https://www.linkedin.com/in/dammyog) github.com/DammyOG

Education

University of Maryland, College Park

Bachelor of Science in Computer Science

GPA: 3.8

Expected Graduation: Dec 2026

Prince George's Community College

Associate of Science in Computer Science

GPA: 4.0

Aug 2022 - May 2024

Technical Skills

Languages: TypeScript, Python, Java, C, JavaScript, SQL, oCaml, x86

Libraries/Frameworks: Next, React, Node, Pandas, Numpy, scikit-learn, Django, Flutter, Express

Platforms: Azure Devops, Jira, AWS, Firebase, Git, REST APIs, Mongo DB, Prisma, Google Cloud Console

Experience

Software Engineer Intern | *MapLarge, Atlanta, GA (Remote)*

May 2025 - Present

- Developed interactive applications showcasing MapLarge's data visualization capabilities for complex geospatial datasets, enabling sales teams to close 3 new client deals from 10 presentations through compelling product demonstrations.
- Integrated MapLarge dashboards into multiple front-end frameworks with responsive design patterns and API optimization, reducing client integration time by 40% and ensuring seamless embedding across diverse architectures.
- Contributed to Agile development cycles and comprehensive code reviews using Azure DevOps CI/CD pipelines with automated testing suites, reducing deployment failures by 60% while maintaining high code quality standards.

Software Engineer Contractor | *MyFridgeRental*

June 2024 - April 2025

- Engineered analytics dashboard using React and modular components with React Context and Radix UI for metric visualization, reducing data analysis time by 70% for 5,000+ daily orders while improving efficiency across teams.
- Executed backend migration from Firebase to AWS Amplify by refactoring import paths and implementing GraphQL queries with subscription-based real-time updates, enabling 50% faster data synchronization and supporting scalability.
- Attended weekly cross-functional planning sessions to define product specifications and technical requirements with other senior engineers, accelerating feature delivery by 25% through improved alignment between business objectives and development priorities.

Projects

CookMate AI | *Flutter, Dart, OpenAI, Google Firebase*

Feb 2025 – Apr 2025

- Built cross-platform mobile app in Flutter integrating OpenAI GPT-4, Google Gemini, and DeepGram APIs for personalized recipe recommendations, voice-to-text cooking instructions, and ingredient-based meal planning.
- Implemented multi-modal AI pipeline using Google Gemini Vision for ingredient recognition from camera input and DeepGram for real-time voice commands, enabling hands-free cooking guidance with 3-second response times.
- Developed Firebase backend for real-time synchronization, secure user authentication with email/social login, and Cloud Storage supporting voice recordings, high-resolution recipe images, and cross-device shopping list generation.
- Created intuitive UI/UX with voice-activated step-by-step cooking guidance, AI-powered ingredient substitution suggestions, and responsive design patterns optimized for both iOS and Android platforms.

Funnels | *React, MongoDB, AWS S3, Cognito, TypeScript, Python*

January 2025 - March 2025

- Developed full-stack web platform for computer science students to upload projects, share tutorials, and view hackathon events, supporting 50+ active users with comprehensive Cognito authentication.
- Implemented comprehensive authentication system using AWS Cognito with JWT token management, S3 file storage, and automated web scraping pipeline collecting real-time data from 15+ hackathon platforms and university event sources.
- Optimized backend architecture by splitting into service-oriented components with improved database indexing, reducing API request time by 50% and supporting better application performance.

GroupMail | *TypeScript, Node, Gmail API, Google Cloud Console, OpenAI API*

Aug 2024 - Nov 2024

- Engineered a Chrome extension leveraging the Gmail API to automatically organize over 1,000 emails into categorized subfolders based on content analysis, implementing batch processing and error handling for reliable email management.
- Implemented OAuth 2.0 for secure authentication and utilized natural language processing (NLP) to improve email categorization accuracy by 85%, streamlining email organization for users.
- Created intuitive user interface with TypeScript featuring real-time categorization previews, customizable folder structures, and interactive dashboard for seamless email organization configuration.

Leadership / Extracurricular

Attended Amazon university event - BEN Tech Resume Prep

AWS YouthTech: University of Maryland Workshop | Participant

March 2025
